

## RTOS Debugger for OSE Delta

**PowerPC**  
**ARM**  
**M683xx**  
**MIPS**  
**XSCALE**

- Real Time, Non-Intrusive Display of OSE Delta System Resources
- Support of Load Modules
- OSE Delta Specific Display of Trace Listing
- Statistic Evaluation and Graphic Display of Process Run Times
- Process related Evaluation of Function Run Times
- Statistic Evaluation and Graphic Display of Process States
- Process Stack Coverage
- Process Context Display
- PRACTICE Functions for OS Data
- OSE Delta related Pull-Down Menu

The TRACE32 System includes a configurable multitask debugger to provide symbolic debugging in real time operating systems. Our software package contains a ready-to-run configuration for the OSE Delta Real Time Kernel from OSE Systems.

In close cooperation with OSE Systems we built a special multitask support for OSE Delta. The additional implemented features in TRACE32 enable you to do an effective debugging on OSE systems.

## Multitask Debugging on TRACE32 with OSE Delta

### Real Time, Non-Intrusive Display of OSE Delta System Resources

The TRACE32 multitask debugger for OSE Delta provides special display functions. The system resources such as process list and signal queues can be displayed. In addition, by using the emulators dual-port memory, the dis-

play of all these regions can be viewed non-intrusively in real time. The tables are updated permanently ("On The Fly"), without affecting the application at all.

Process list window and detailed view of one process

### Support of Load Modules

TRACE32 supports debugging of Load Modules (aka satellites) in OSE. You're able to debug dynamically loaded pro-

grams with full symbol information at high level language source code.

List of all loaded Load Modules

## OSE Delta Specific Display of Trace Listing

The data recorded in the analyzer can be displayed and interpreted specific to the operating The process switches are displayed symbolically

```

```

Analyzer listing, task selective recording, display of task switches, assembler mnemonics and HLL lines

## Statistic Evaluation and Graphic Display of Process Run Times

The analyzer can calculate statistic tables of process run times and process switches. A graphical diagram

shows which process was active at a specific time, giving a clear view of the behaviour of the system.

Statistics and flow of processes

## Process related Evaluation of Function Run Times

The statistic and graphic evaluation of function calls and function run times can be done dependant to the actual running process. This is necessary, if

different processes call one single function at the same time, or if a process switch occurs in between the function.

range	tree	max	avr	ratio
total: 703.048ms				
(root)@door_sensor	(root)@door_sensor	5.349ms	5.349ms	0.017%
door_sensor@door_sensor	door_sensor@door_sensor	1.045ms	1.045ms	0.743%
(root)@ose_tickd	(root)@ose_tickd	199.592ms	199.592ms	28.389%
(root)@run	(root)@run	479.588ms	479.588ms	68.215%

Analyzer listing, function call hierarchy and process switches

## Statistic Evaluation and Graphic Display of Process States

These tabular and graphical analyses of the status of processes show the various states (i.e. running, ready, waiting, suspended and undefined) and

times each process spent in each state. A graphical view of the data can help to highlight prioritisation problems, critical paths etc.

Statistics and flow of process states

## Process Stack Coverage

In real time systems it is quite important to know, how much stack space each process consumes. For this purpose

a special window shows the current and the maximum usage of each separate process.

magic	bottom	top	sp(stk)	sp(reg)	curr	max	usage	0	10	20	30
run	0011CBE0	0011C900	0011CBD0		2%	0011CB30	24%	[Bar chart]			
door_opener	0011CFE0	0011CD00	0011CFD0		2%	0011CF50	19%	[Bar chart]			
central	0011D3E0	0011D100	0011D3D0	0011D3B8	5%	0011D350	19%	[Bar chart]			
main	0011EBE0	0011E5E0	0011EBD0		1%			[Bar chart]			

Process stack coverage window

## Process Context Display

The TRACE32 Multitask debugger provides an easy way to switch the current displayed context to another process. Normally all register related windows (e.g. listing at current PC, local variables or function call stack)

are displayed related to the actual context (i.e. current executed process).

You can switch to the context of another process to see all this information at the time this process was scheduled.

## PRACTICE Functions for OS Data

The support includes extended PRACTICE functions for process specific data. E.g. the function "TASK.CON-

FIG(magic)" returns the address of the so called magic value.

## OSE Delta related Pull-Down Menu

Because the menu bar of the TRACE32 user interface can be fully customized, you can create a new pull down menu, including operating sys-

tem specific commands. We deliver OSE Delta support with an example for such specific menus, which provides fast access to the OSE Delta features.

TRACE32 with OSE Delta menu
